

Data Platform as a Service

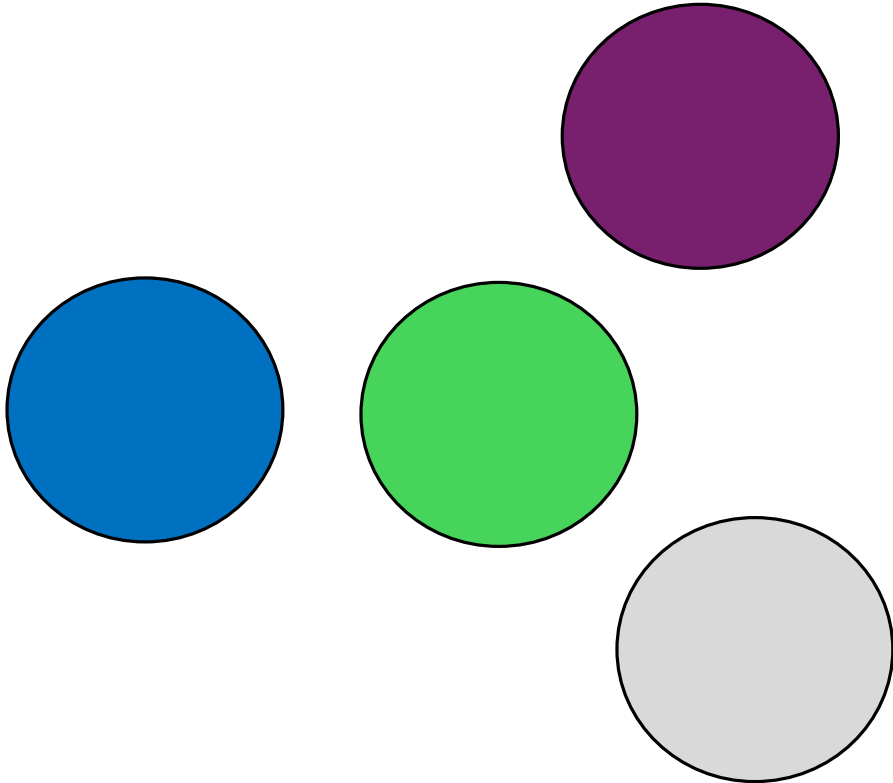

Presenter: Adriel

Date: 11 March 2026

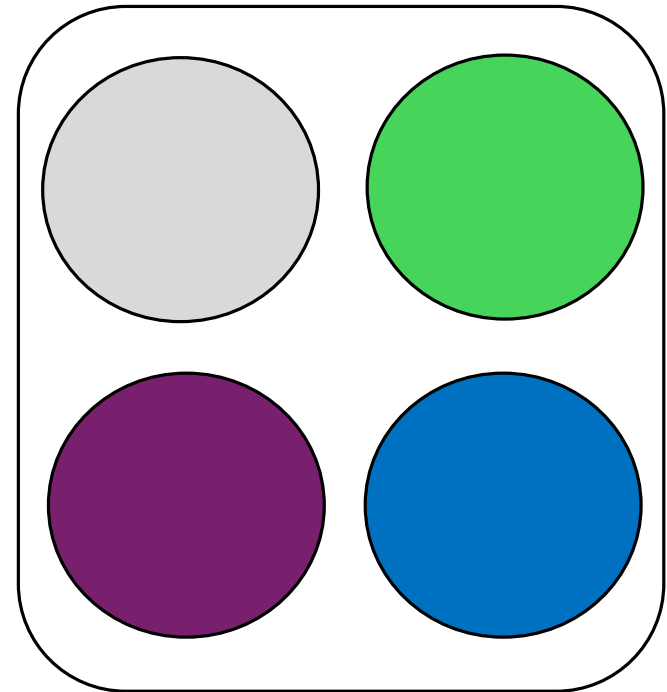

Why a data platform exists ?

System purpose

Before

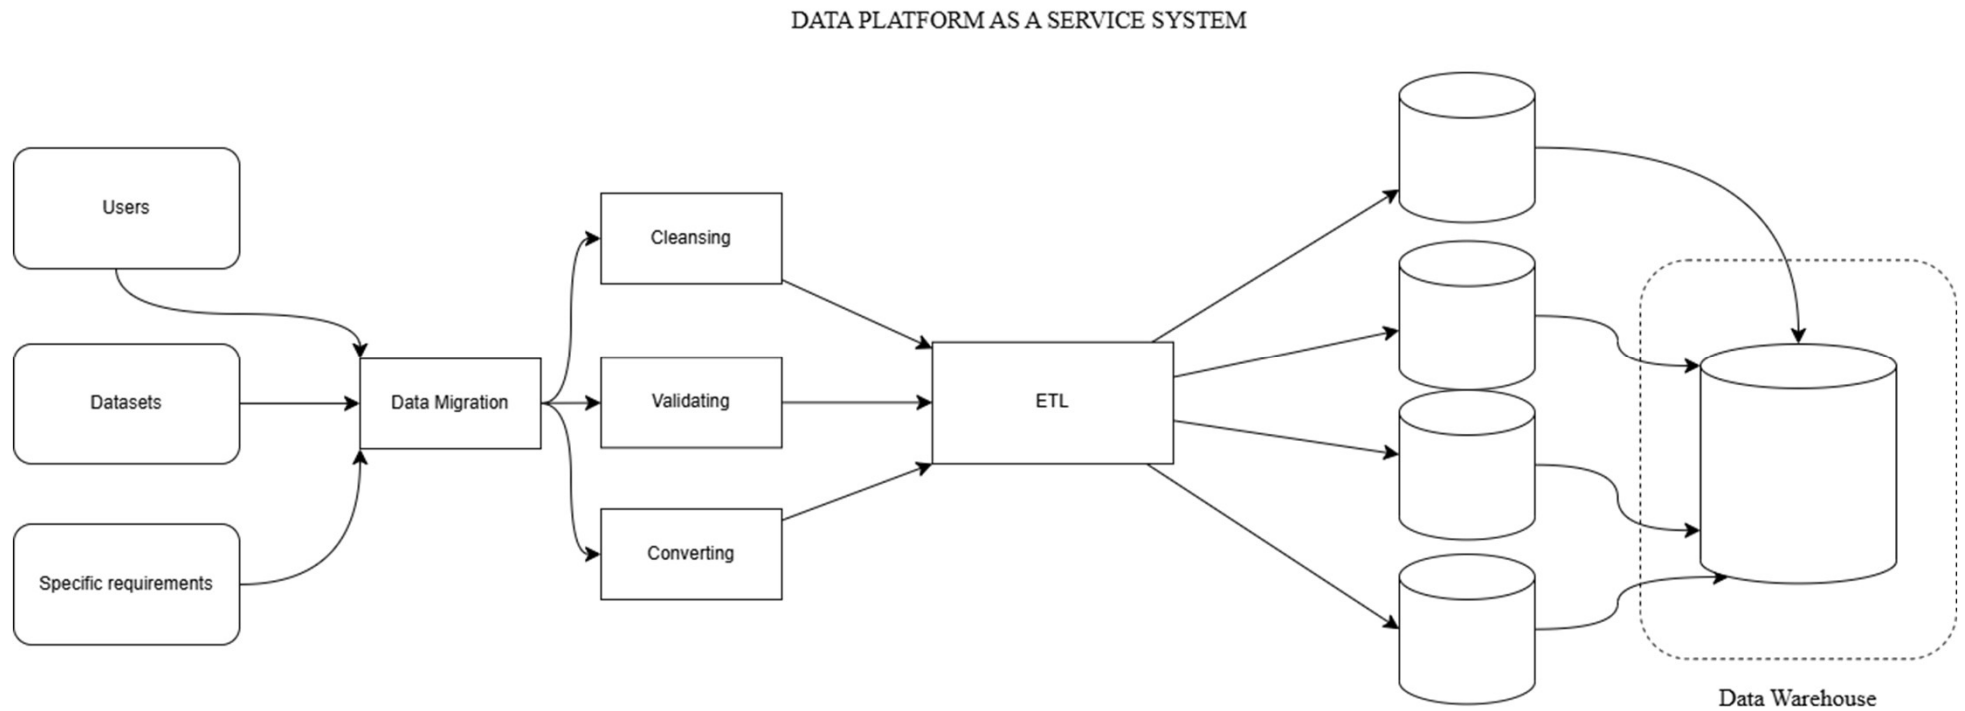

After

Data Warehouse

Architecture and System Scope:

How data entering the platform ?

- Batch / stream / API
- Kafka

Gantt chart Project Time Line

Gantt chart Project Time Line

[illegible]

Risk Assessment matrix

R1	User access information they should not see			
R2	User may <u>lost</u> data with accidental delete			
R3	User forgot to save data			
R4	User <u>log</u> in but forgets where their model stored			
R5	<u>User</u> confuse about experiment results			

Resource Planning

	Number of people	How long	Which tasks
System analyst	1	All	
Software engineer	3	All phases	Coding, connect to databases
Quality assurance	1	Design and implement phase	Check system quality
Product manager	1	All phases	Checks product aligns with end users want
UI/ UX designer	1	Design and implement phases	Verify and validates the interface design easy to use
Solution architect	1	All	Verify API

System testing

Test scope:

TC1: Dataset CRUD

- Upload or either add dataset
- View dataset
- Changes dataset
- Delete the dataset from the system

TC2: Creates new experiment

- Validates user if they want to select new experiment
- Validate if users have logged in to the system and user has enough space to start
- Let user continue if they have met the training specifications, otherwise they will be unable to run new experiment since the environment does not have enough memory

How can data become useful to end users ?

- Opens and run successfully when cloning git
- User can describe, use and process the dataset
- Access the system after logging and training

Post implementation review criteria

- Fix bugs
- Checks database consistency
- Maintain low memory
- Users can clean their dataset
- Users can integrate datasets and save it to a database.

How business uses the data ?

Integrate with these use cases:

- APIs
- Data analysis
- BI dashboards

Takeaways:

- How business operates relates to data platform ?
- What can we update to improve in the future ?
